**Low-Frequency Waves in Space Plasmas (Geophysical Monograph Series)** Andreas Keiling, Dong-Hun Lee, Valery Nakariakov

Low-frequency waves in space plasmas have been studied for several decades, and our knowledge gain has been incremental with several paradigm-changing leaps forward. In our solar system, such waves occur in the ionospheres and magnetospheres of planets, and around our Moon. They occur in the solar wind, and more recently, they have been confirmed in the Sun's atmosphere as well. The goal of wave research is to understand their generation, their propagation, and their interaction with the surrounding plasma. *Low-frequency Waves in Space Plasmas* presents a concise and authoritative up-to-date look on where wave research stands: What have we learned in the last decade? What are unanswered questions?

While in the past waves in different astrophysical plasmas have been largely treated in separate books, the unique feature of this monograph is that it covers waves in many plasma regions, including:

- Waves in geospace, including ionosphere and magnetosphere
- Waves in planetary magnetospheres
- Waves at the Moon
- Waves in the solar wind
- Waves in the solar atmosphere

Because of the breadth of topics covered, this volume should appeal to a broad community of space scientists and students, and it should also be of interest to astronomers/astrophysicists who are studying space plasmas beyond our Solar System.

**From reader reviews:**

**Wilson Gonzalez:**

Book is written, printed, or created for everything. You can understand everything you want by a publication. Book has a different type. As we know that book is important issue to bring us around the world. Adjacent to that you can your reading expertise was fluently. A reserve Low-Frequency Waves in Space Plasmas (Geophysical Monograph Series) will make you to possibly be smarter. You can feel more confidence if you can know about everything. But some of you think that will open or reading any book make you bored. It's not make you fun. Why they can be thought like that? Have you trying to find best book or suited book with you?

**Charles Shrader:**

Reading a book to be new life style in this year; every people loves to read a book. When you learn a book you can get a wide range of benefit. When you read guides, you can improve your knowledge, since book has a lot of information upon it. The information that you will get depend on what forms of book that you have read. In order to get information about your study, you can read education books, but if you act like you want to entertain yourself look for a fiction books, these kinds of us novel, comics, in addition to soon. The Low-Frequency Waves in Space Plasmas (Geophysical Monograph Series) provide you with new experience in studying a book.

**Dallas Richardson:**

In this particular era which is the greater man or woman or who has ability in doing something more are more treasured than other. Do you want to become one among it? It is just simple strategy to have that. What you must do is just spending your time very little but quite enough to possess a look at some books. One of several books in the top checklist in your reading list will be Low-Frequency Waves in Space Plasmas (Geophysical Monograph Series). This book and that is qualified as The Hungry Inclines can get you closer in turning out to be precious person. By looking way up and review this e-book you can get many advantages.

**Rhonda Lanham:**

You can find this Low-Frequency Waves in Space Plasmas (Geophysical Monograph Series) by look at the bookstore or Mall. Only viewing or reviewing it could to be your solve issue if you get difficulties for the knowledge. Kinds of this guide are various. Not only by means of written or printed and also can you enjoy this book through e-book. In the modern era including now, you just looking by your local mobile phone and searching what their problem. Right now, choose your ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still upgrade. Let's try to choose proper ways for you.
