ISO TC 61/SC 11/WG 5

ISO 14679:1997, Adhesives -- Measurement of adhesion characteristics by a three-point bending method ISO TC 61/SC 11/WG 5

This International Standard specifies a test method to determine the ability of a cured adhesive (if necessary with a primer) to adhere to a substrate with a certain surface finish, or which has been subjected to a specific surface preparation, using the “three-point bending method”. This standard is only applicable to quality assurance and only to substrates which are rigid or resistant enough to bending, such as steel or aluminium alloys. For other substrates, the thickness is adjusted to the modulus of elasticity or a suitable stiffener is used. The adhesive is allowed to cure without the application of pressure in order to obtain the thickness needed to provide sufficient rigidity, otherwise a bonded reinforcing piece of the same material and the same thickness as the substrate is substituted for the block of adhesive. This test method is not suitable for film adhesives. This title may contain less than 24 pages of technical content.

From reader reviews:

Sally Oneal:

What do you in relation to book? It is not important with you? Or just adding material when you really need something to explain what your own problem? How about your spare time? Or are you busy person? If you don't have spare time to perform others business, it gives you the sense of being bored faster. And you have extra time? What did you do? Every individual has many questions above. They must answer that question because just their can do that. It said that about guide. Book is familiar in each person. Yes, it is suitable. Because start from on pre-school until university need this particular ISO 14679:1997, Adhesives -- Measurement of adhesion characteristics by a three-point bending method to read.

Helen Rios:

Information is provisions for those to get better life, information currently can get by anyone in everywhere. The information can be a know-how or any news even a concern. What people must be consider any time those information which is within the former life are challenging to be find than now's taking seriously which one is appropriate to believe or which one the resource are convinced. If you find the unstable resource then you understand it as your main information we will see huge disadvantage for you. All of those possibilities will not happen with you if you take ISO 14679:1997, Adhesives -- Measurement of adhesion characteristics by a three-point bending method as the daily resource information.

Clement Williams:

Playing with family in the park, coming to see the coastal world or hanging out with pals is thing that usually you have done when you have spare time, in that case why you don't try factor that really opposite from that. One activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition of knowledge. Even you love ISO 14679:1997, Adhesives -- Measurement of adhesion characteristics by a three-point bending method, you are able to enjoy both. It is fine combination right, you still wish to miss it? What kind of hang-out type is it? Oh can occur its mind hangout fellas. What? Still don't understand it, oh come on its named reading friends.

Heather Delph:

Your reading sixth sense will not betray a person, why because this ISO 14679:1997, Adhesives -- Measurement of adhesion characteristics by a three-point bending method publication written by well-known writer who knows well how to make book that may be understand by anyone who also read the book. Written with good manner for you, leaking every ideas and composing skill only for eliminate your own personal hunger then you still question ISO 14679:1997, Adhesives -- Measurement of adhesion characteristics by a three-point bending method as good book not only by the cover but also through the content. This is one publication that can break don't ascertain book by its handle, so do you still needing one more sixth sense to pick this kind of!? Oh come on your reading through sixth sense already said so why you

have to listening to another sixth sense.
